

## Digital Contact List

The RadioID.net website has stopped providing the Digital Contact List in the CSV file format. Now the only file format is JSON.

The AnyTone Json-To-Csv converter program will allow you to convert a .json file to .csv file very quickly.

The convert operation is as below.

- 1) Extract **Digital ID List Converter.zip** to a folder
- 2) Run the **JsonToCsv.exe**
- 3) Click on **Convert**, it will allow you open a .json file
- 4) Click on **Save**, it will save to a .csv file
